Plant Evergreens Now for Year 'Round Beauty

EVERGREENS

The evergreens are all time-tried, popular varieties of established merit. Each is a quality plant several times transplanted and each has a large ball of native loam, burlap wrapped about roots. The evergreens listed represent only part of the many choice varieties and sizes growing in Little Tree Farms' 200 acre nurseries.

These choice evergreens come to you fresh and are suited to a myriad of uses. Plant them singly on your lawn—in shrubbery borders—at home and garden entrances—as tall screens and hedges—as accents in your flower garden.

Juniperus virginiana—RED CEDAR

Red Cedars are ideally suited to a great variety of formal uses. Indifferent alike to moist ground and dry, barren soil, to the biting winds of winter and burning summer heat Red Cedars are vigorous and hardy in practically any sunny location.

Evergreens are the greatest factor in successful planting of home grounds and larger landscapes, for they combine in the highest degree beauty and lasting qualities. The right choice and wise use of evergreens means a home equally beautiful at all seasons of the year. Every one of the evergreens listed here is right for home planting.

THE YEWS

Taxus cuspidata—JAPANESE YEW

A very fine Yew of spreading form. Long lived. The Yews are all remarkably resistant to adverse city conditions and grow even in shade.

HEMLOCK

Tsuga canadensis—CANADA HEMLOCK

A most graceful evergreen. Will grow to a beautiful large tree or can be kept small by trimming. Thrives in partial shade and in cold damp locations. Stands almost any amount of shearing.

AZALEAS AND BROADLEAVED EVERGREENS

This most valuable group of large and small shrubs is characterized by broad green leaves which remain throughout the year. Many of them flower or fruit profusely and the glossy foliage and bright blossoms or berries contrast pleasingly with the more sombre coniferous evergreens. The Azaleas are not evergreen, but they have characteristics similar to those of some of the broadleaved evergreens.

Pieris floribunda—MOUNTAIN

USE PEAT MOSS

In Planting Your Evergreens

Peat Moss is a highly absorbent, moisture retaining material, weed and fungus free which contributes to the humus-forming qualities in the soil. A true and acid peat and a native soil element for all evergreens.

Use Peat Moss in planting all evergreens—one-third peat to two-thirds soil mixed thoroughly. Use Peat Moss also as a three-inch mulch on all evergreen plantings. It conserves moisture, keeps down weeds and improves the appearance of evergreen hade

We offer fine quality imported Peat Moss (one bale will cover 80 sq. ft. approximately 3 inches deep).
